PRESIDENT UNIVERSITY

2025

INTRODUCTION

Janji Jiwa is a company engaged in the culinary field, especially providing coffee drinks and other products. Established in 2018, it has grown rapidly into one of the leading coffee shops in Indonesia with a modern concept and fast service. Starting from a simple coffee shop, it now has more than 500 outlets across Indonesia, making it one of the most recognized coffee brands in the country.

The company offers a wide range of coffee variants with high-quality ingredients, which are processed efficiently to provide customers with a unique coffee experience. In addition, Janji Jiwa is known for its fast service and uses an app-based ordering system to increase customer convenience. In running its operations, Janji Jiwa relies heavily on business process efficiency, especially in raw material inventory management, employee management, and product distribution.

The reason for choosing Janji Jiwa as the object of this project is that this company already has a fairly large operational system and requires an in-depth analysis of existing business processes to improve efficiency and reduce potential problems. We see an opportunity to make improvements in several aspects of their business processes, especially those related to the management of raw material purchases, inventory management, and human resource management.

The scope of this project includes analyzing the existing processes within the company, with a focus on the purchasing, production, and warehouse functions, as well as developing technology-based solutions that can improve efficiency and reduce existing operational constraints.

THE PROCESS OF THE COMPANY

1. HR Functions & Process Details

The Human Resources (HR) function plays a strategic role in managing the employee lifecycle from recruitment and onboarding to training, attendance, and payroll. It ensures not only that staffing needs are met but also that employee discipline, well-being, and career development are aligned with the company's operational goals and brand values.

1) Recruitment & Onboarding

To ensure workforce availability across all outlets (Internship, Part-Time, Full-Time) in a timely and qualified manner.

- Job Vacancy Sources :
 - Jiwa Group's official website: <https://jiwagroup.com/id/career>
 - External platforms: Instagram, Glints, Jobstreet, etc.
- Employee Types :
 - Internship: Hourly-based, part-time system for students. Salary capped at IDR 3,300,000 per month.
 - Part-Time: Hourly-based, flexible. Potential salary exceeds internship.
 - Full-Time: Fixed employment with daily wages and 4 official days off per month.
- Selection Flow :
 - CV Submission → Online Interview → Screening by DM → Approval by Arco → 1-week Pre-employment Training.
 - Placement Policy:
 - Location assignment is determined AFTER training completion
 - Candidates are NOT informed of their placement location beforehand
 - Assignment is based on operational needs rather than candidate preferences

➤ Systems Used:

- Google Forms for initial application collection
- Jiwa Group's internal career portal for processing
- Manual CV screening and selection

2) Attendance, Payroll, and Discipline

- HRIS Mobile Application - ProinT :

All attendance and payroll matters are centralized through the **ProinT HRIS Mobile App**, including :

- Clock-in/Clock-out recording
- Accessing salary slips (including tax and BPJS deductions)

- Submitting leave requests
- Filing complaints directly to central HR
- Work Schedule Management Process:
 - Department Managers (DM) create work schedules
 - Person-In-Charge (PIC) at each outlet distributes schedules through group chat
 - No centralized real-time scheduling system exists
 - Changes and adjustments happen through manual communication
- Detailed Salary Structure & Deductions:
 - Internship:
 - Hourly rate with IDR 29,000 per hour deduction for lateness/absence
 - Maximum monthly salary: IDR 3,300,000
 - Part-Time:
 - Hourly rate with IDR 30,000 per hour deduction for lateness/absence
 - No salary cap, potentially exceeding internship rates
 - Full-Time:
 - Daily wage structure
 - Late arrival (>1 hour): IDR 35,000 deduction
 - Absence: IDR 175,000/day deduction
 - Base salary follows UMR (regional minimum wage) or employment contract
- Payroll Processing:
 - Payment date: 28th of every month
 - Manual calculation of hours/attendance by PICs
 - Manual verification of deductions
 - ProinT system generates salary slips

3) Training & Career Development

- Pre-employment Training (1 Week):
 - Managed and conducted by Arco (Training Division)
 - One-time training prior to deployment
 - Content includes:
 - In-store Standard Operating Procedures (SOPs)
 - Customer service and communication skills

- Detailed product knowledge
- Post-Training Deployment:
 - Employees assigned to outlets based solely on operational needs
 - No consideration of employee location preferences
 - Placement information not disclosed during recruitment or training
- Career Progression Framework:
 - Full-Time employees receive priority for promotion opportunities
 - Promotion criteria includes:
 - Daily performance metrics
 - Discipline record and shift handling capability
 - Minimum tenure requirement (typically 1 year)
 - Exceptional performers may be promoted earlier
 - Limited clear progression path for Part-Time staff
- Disciplinary Process:
 - Initial verbal reprimands from peers or outlet PIC
 - Escalation process for repeated or serious violations
 - Serious issues directed to Arco or Department Manager
 - No standardized progressive discipline system

2. Function Production

The **Production function** is one of the core operations at Janji Jiwa, responsible for processing raw materials into finished products, with a focus on taste consistency, work efficiency, and product quality. This function encompasses various key aspects such as daily production planning and execution, team management, quality control, and product adjustments based on customer feedback. At Janji Jiwa, production is not limited to making beverages or food items like Janji Toast, but also includes employee training, handling of substandard raw materials, and strict enforcement of discipline and standard operating procedures (SOPs) to maintain service quality and customer satisfaction across all branches.

1) Production (Work Process and Product Quality)

Production at Janji Jiwa focuses on maintaining consistency in taste, operational efficiency, and product quality. Key aspects of the production function include:

- **Consistency of Taste & Quality:**
Taste standards are strictly maintained across all branches. Vendors are carefully selected to ensure consistent and stable flavor profiles.
- **Daily Output:**
On average, each outlet produces approximately 200 cups of beverages per day.
- **New Barista Training:**
Training is conducted for 2 weeks by the Person in Charge (PIC) before baristas are allowed to work independently.
- **Training Frequency:**
Monthly competitions are held as a form of skill development. Baristas who have already been certified are not required to participate again.
- **Team Management During Peak Hours:**
Teams are divided by roles: cashier, barista, and pickup staff. Products like *Janji Toast* require more time due to cooking processes.
- **Response to Customer Feedback:**
Customer feedback is gathered via the JiwaCare system and used to update the menu on a monthly basis.
- **Employee Performance Evaluation:**
Production errors, such as spoiled beverages, are investigated. Employees are asked whether they have followed the proper ingredient-checking procedures before production.
- **Sanction System:**

A **three-strike warning system** is implemented. Upon receiving the third warning (SP), the employee will be issued an **SPPT (Termination Warning Letter)** as grounds for dismissal.

2) Rejection (Product or Ingredient Rejection and Handling)

Handling of substandard products or ingredients is done systematically:

- **Waste Recording:**
Rejected beverages or ingredients are logged in the Sanmi application as *waste quantity*. The barista is not personally held accountable.
- **Quality Issue Tracking:**
Complaints such as spoiled drinks or incorrect orders are managed through the JiwaCare

system. Problematic products are replaced the same day.

- **Customer Complaint System:**

All customer complaints are processed through JiwaCare for follow-up and immediate resolution.

3) Transfer Item (Distribution and Movement of Goods or Ingredients)

Although not explained in detail, raw material distribution is carried out via a centralized system:

- **Product Consistency Through Vendors:**

Vendors are carefully selected to ensure material uniformity across all outlets.

3. Function Purchasing

Purchasing is the process of procuring goods or services needed to support the company's operations. This process includes identifying needs, selecting vendors, creating Purchase Orders (POs), delivering goods, and making payments to suppliers. The main objective of purchasing is to ensure that the required goods are available on time, with good quality and at a competitive price.

Purchasing is the process of procuring goods or services needed to support the company's operations. This process includes identifying needs, selecting vendors, creating Purchase Orders (POs), delivering goods, and making payments to suppliers. The main objective of purchasing is to ensure that the required goods are available on time, with good quality and competitive prices.

Purchasing Process at Janji Jiwa

The purchasing process at Janji Jiwa includes several main steps starting from vendor selection to receipt of goods.

1. Vendor Selection

The main vendor for raw materials such as coffee and sugar is PT Kurnia Boga Naraya, while for milk and vegetables, Janji Jiwa works with Sukanda Jaya and Ranum Induk Buah. Vendor selection is based on quality and on-time delivery.

2. Submission of Purchase Order (PO)

Once the vendor is selected, the PIC at the branch creates a PO using the SANMI application, which contains product details, prices, and agreed delivery times.

3. PO Approval

The PO must be approved by the District Manager (DM) and TSA. This approval process usually takes 4-7 days to ensure compliance with the needs and budget.

4. Delivery and Receipt of Goods

Once the PO is approved, the vendor delivers the goods. The PIC receives the goods and the Warehouse verifies the quantity and quality of the goods received.

5. Dealing with Discrepancies

If there is a discrepancy in the quantity or quality of goods, the Warehouse will verify and communicate with the vendor to resolve the issue.

ANALYSES OF THE PROCESSES

1. HR Processes

1) Recruitment & Onboarding : Critical Analysis

Critical Issues Identified:

- Hidden Placement Policy:
 - Withholding placement information until after training creates significant misalignment of expectations
 - Employees invest a week in training without knowing their ultimate work location
 - Leads to potential dissatisfaction and early turnover when assigned locations don't match commuting preferences
 - Creates inefficiency when employees decline positions after training resources have been invested
- Manual Application Processing:
 - Google Forms collection method lacks automated filtering capabilities
 - Manual CV screening is time-intensive for HR staff
 - No built-in analytics to track source effectiveness or conversion rates
 - Slow processing time between application submission and initial response
- Screening Subjectivity:
 - Heavy reliance on individual judgment during CV screening
 - Potential for unconscious bias in selection
 - Inconsistent screening criteria between different HR personnel
 - Limited standardization of qualification metrics

Technology Solution: Applicant Tracking System (ATS)

Detailed Functionality:

- **AI-Powered Screening:** Systems like BambooHR or Workable use artificial intelligence to scan CVs for:
 - Relevant keywords and skills
 - Experience duration and relevance
 - Education qualifications
 - Availability matching
- **Centralized Job Board Integration:**
 - Single dashboard for posting across multiple platforms
 - Unified applicant pool from all sources
 - Candidate source tracking and analytics
 - Performance metrics for each recruitment channel
- **Automated Communication:**
 - Instant acknowledgment emails upon application
 - Status update notifications
 - Interview scheduling and calendar integration
 - Personalized rejection emails with minimal HR effort
- **Analytics and Reporting:**
 - Time-to-fill metrics
 - Source effectiveness
 - Conversion rates at each hiring stage
 - Cost-per-hire calculations

Why This Technology Is Necessary:

- **Efficiency Gains:** Reduces HR administrative workload by 60-70% in screening phases
- **Bias Reduction:** Standardized screening criteria applied uniformly to all candidates
- **Improved Candidate Experience:** Faster responses and transparent process updates
- **Data-Driven Recruitment:** Analytics enable continuous improvement of sourcing strategies

- Cost Effectiveness: Reduces time-to-hire and administrative costs associated with recruitment

2) Attendance & Payroll: Critical Analysis

Critical Issues Identified:

- Manual Input Dependency:
 - Attendance data manually entered by outlet PICs introduces human error risk
 - No verification mechanism to ensure accuracy of entered data
 - Time lag between actual attendance and system recording
 - Potential for favoritism or manipulation in attendance reporting
- Inefficient Scheduling Process:
 - Group chat distribution lacks structure and accountability
 - No centralized record of schedule changes or modifications
 - Difficult for employees to track historical schedules
 - Confusion when messages are missed or overlooked
 - No advance notification system for upcoming shifts
- Slow Complaint Resolution:
 - 4-day response window is excessively long for time-sensitive issues
 - No prioritization system for urgent matters
 - Lack of transparency in complaint status tracking
 - Diminishes employee trust in HR support

Technology Solution: Real-Time Shift Scheduling Software + Chatbot Integration

Detailed Functionality:

- Digital Scheduling Platform: Systems like Deputy or Jibble provide:
 - Drag-and-drop shift creation interface for managers
 - Real-time publishing to employee mobile apps

- Shift swapping and availability management
- Time-off request integration
- Forecast-based scheduling using historical data
- ProinT Integration Features:
 - Automatic syncing between scheduling platform and HRIS
 - Push notifications for schedule changes
 - Geolocation verification for clock-ins
 - Automated attendance reporting
- HR Chatbot Capabilities: (e.g., Tidio, Freshchat)
 - 24/7 availability for common HR queries
 - Natural language processing for question understanding
 - Instant responses to frequently asked questions:
 - Leave balance inquiries
 - Payslip status checks
 - Policy clarifications
 - Deduction explanations
 - Automatic escalation to human HR for complex issues

Why This Technology Is Necessary:

- Real-Time Accountability: Instant schedule distribution eliminates communication gaps
- Error Reduction: Automated attendance verification reduces manual entry errors
- Improved Communication: Notifications ensure employees never miss schedule changes
- Resource Optimization: HR staff freed from answering routine questions
- Employee Satisfaction: Immediate responses to common queries enhance trust

3) Training & Career Development: Critical Analysis

Critical Issues Identified:

- **Single-Point Training Model:**
 - One-time training creates knowledge retention issues
 - No mechanism for skill refreshment or updates
 - Inconsistent service quality as memory fades
 - No verification of ongoing competency
- **Lack of Learning Infrastructure:**
 - No centralized system to track training completion
 - Inability to measure knowledge retention
 - Manual record-keeping of training participation
 - Difficult to identify skill gaps across the organization
- **Opaque Career Path:**
 - Part-Time staff lack visibility into advancement opportunities
 - No clear qualification criteria for promotions
 - Subjective evaluation process
 - Limited self-development guidance

Technology Solution: Learning Management System (LMS)

Detailed Functionality:

- **Standardized Training Modules:** Platforms like TalentLMS or Moodle offer:
 - Multimedia lesson content (video, interactive elements)
 - Step-by-step SOP explanations
 - Product knowledge libraries
 - Customer service scenario simulations
 - Soft skills development courses
- **Progress Tracking System:**
 - Individual learner dashboards
 - Completion status monitoring
 - Quiz and assessment scoring
 - Certification issuance and tracking

- Automatic reminder system for incomplete training
- Analytics Dashboard:
 - Team-level completion rates
 - Average assessment scores
 - Knowledge gap identification
 - Training effectiveness metrics
 - Correlation between training and performance
- Career Development Tools:
 - Skill requirement mapping for each position
 - Personalized development plans
 - Required certification pathways
 - Transparent promotion criteria

Why This Technology Is Necessary:

- Consistent Quality: Standardized training ensures uniform service delivery
- Knowledge Retention: Regular refresher modules maintain competency
- Measurable Outcomes: Assessment data provides objective skill evaluation
- Motivation Enhancement: Clear development paths encourage employee engagement
- Operational Efficiency: Self-paced learning reduces training administration costs

2. Function Production

1) Raw Material Procurement

- **Current Process:** Vendors are carefully selected to ensure stable quality and flavor across all branches.
- **Pro:** Guarantees consistent taste and reliable product quality.
- **Disadvantage:** Delivery schedules and logistics may lack transparency or real-time tracking.

2) Ingredient Inspection

- **Current Process:** Staff inspects all materials before use. Spoiled or expired items are recorded in the Sanmi app as waste.
- **Pro:** Helps avoid using bad ingredients and ensures hygiene.
- **Disadvantage:** Relies heavily on manual checks by staff; no automated alert system is in place.

3) Handling Peak Hours

- **Current Process:** Teams are divided into cashier, barista, and pickup roles to handle rush times efficiently.
- **Pro:** Role division helps maintain service flow and reduces confusion during busy periods.

- **Disadvantage:** This structure may lack flexibility; if one station is overwhelmed, others can't always help easily.

4) Employee Performance Monitoring

- **Current Process:** Mistakes like spoiled drinks are investigated, and staff are asked if SOPs were followed.
- **Pro:** Encourages responsibility and procedural compliance.
- **Disadvantage:** Focuses more on post-error investigation rather than preventative or supportive coaching.

3. Function Purchasing

Purchasing Process Analysis at Janji Jiwa

The purchasing process at Janji Jiwa consists of several stages that are directly related to the procurement of raw materials for coffee shop operations. Based on interviews with Ella Sania, the following is an in-depth analysis of the existing purchasing process, including the problems faced and potential improvements.

1. Vendor Selection

- Current Process: Key vendors such as PT Kurnia Boga Naraya for key raw materials and Sukanda Jaya for milk are determined by the Head Office.
- Analysis:
Pros: Centralized and standardized, easy to manage.
Disadvantages: Limited to existing vendors, with no opportunity to explore new vendors who can offer better prices or quality.

2. Purchase Order (PO) Submission

- Current Process: PIC submits PO via SANMI application, which contains product, price, and delivery details. The PO requires manual approval from the relevant parties.
- Analysis:
Pros: SANMI application simplifies PO submission and structure.
Disadvantages: Manual process slows down verification and is prone to errors.

3. PO Approval

- Current Process: POs need to be approved by DM and TSA, which takes 4-7 days.
- Analysis:

Pros: Multi-stakeholder approval process ensures policy compliance.
Disadvantages: Manual process slows down the procurement of urgent items.

4. Delivery and Receipt of Goods

- Current Process: Goods are shipped by vendors and received by PICs which are then verified by Warehouse.
- Analysis:
Pros: Delivery as agreed.
Disadvantages: Manual verification can cause errors and delays, with no automatic notification of shipment status.

5. Non-Conformance Handling

- Current Process: If there is a discrepancy, Warehouse will verify and communicate with the vendor for resolution.
- Analysis:
Pros: Handles issues in a structured manner.
Disadvantages: Manual processes cause delays in resolving issues or returning goods.

SUGGESTION FOR IMPROVEMENT

1. HR Processes

1) Recruitment & Onboarding Transformation

- Automated Screening via ATS:
 - All job applications are received through an integrated ATS portal
 - System automatically scores candidates on a 100-point scale based on:
 - Experience relevance (40%)
 - Availability alignment (30%)
 - Skills match (20%)
 - Educational background (10%)
 - Applications scoring above 70 points are automatically forwarded for interview scheduling
 - Below-threshold applications receive automated courteous rejection emails

- HR dashboard displays real-time applicant pipeline analytics
- Preference-Based Pre-Placement:
 - Application form includes a mandatory section for location preferences
 - Candidates select three preferred work locations or departments from drop-down menu
 - System tags these preferences in the candidate profile
 - Algorithm attempts to match preferences with operational needs during placement
 - Early transparency reduces post-training rejections
 - Candidate expectations are properly managed from the beginning
- Implementation Requirements:
 - ATS software installation and configuration
 - Integration with existing career portal
 - Creation of scoring algorithm based on position requirements
 - Training for HR staff on system usage
 - Development of preference matching algorithm

2) Attendance & Scheduling Revolution

- Digital Shift Scheduling:
 - Department Managers create weekly schedules through intuitive drag-and-drop interface
 - System automatically checks for scheduling conflicts
 - Completed schedules instantly publish to the ProinT app
 - Employees receive immediate notifications of new schedules
 - Historical schedule data is preserved for reference and analysis
 - Schedule changes trigger instant alerts to affected staff
- Automated Reminders:
 - System sends push notifications to employees:
 - 24 hours before scheduled shift

- 2 hours before shift start time
- 15 minutes before break end
- Calendar integration with smartphone native apps
- Option to acknowledge receipt of schedule changes
- Reduction in late arrivals and missed shifts
- Smart Attendance Logging:
 - Clock-ins and clock-outs verified through multiple methods:
 - Geofencing technology ensures employee is physically present
 - Facial recognition (opt-in) prevents buddy punching
 - Timestamp verification with photo capture option
 - Exception handling for legitimate technical issues
 - Manager override capabilities with required documentation
 - Significant reduction in time theft and attendance fraud
- Implementation Requirements:
 - Scheduling software selection and deployment
 - ProinT system API integration development
 - Mobile app enhancement for notifications
 - Geolocation and facial recognition technology integration
 - Staff training on new digital systems

3) Complaints & Leave Request Optimization

- Integrated HR Chatbot:
 - AI-powered assistant embedded within the ProinT app answers:
 - Policy questions (e.g., "How many leave days do I have?")
 - Procedural inquiries (e.g., "How do I request overtime?")
 - Payroll questions (e.g., "Why was my salary deducted?")
 - General HR information (e.g., "When is the next holiday?")
 - Natural language processing understands conversational queries
 - 24/7 availability ensures immediate assistance
 - Response accuracy rate target of 95%+
 - Continuous learning from new inquiries

- Auto-Ticketing & Escalation Matrix:
 - All submitted complaints automatically generate unique ticket numbers
 - Employee receives instant confirmation of submission
 - Complaint categorization by urgency:
 - Critical (4-hour response time)
 - High (24-hour response time)
 - Standard (48-hour response time)
 - Progress tracking through the ProinT app
 - Automatic escalation if SLA timeframes are exceeded
 - Manager notifications for unresolved critical issues
- Implementation Requirements:
 - Chatbot development or third-party solution integration
 - Knowledge base creation for common queries
 - Ticketing system implementation
 - SLA configuration and monitoring setup
 - Integration testing with existing systems

4) Training & Development Enhancement

- Mandatory LMS Onboarding:
 - New hires receive login credentials upon acceptance
 - Required completion of online modules before physical training:
 - Company history and values
 - Basic product knowledge
 - Customer service fundamentals
 - Safety and hygiene protocols
 - Interactive video demonstrations with knowledge checks
 - Minimum passing score requirement (80%)
 - Completion certificate generation
 - Reduction in in-person training time by 30%
- Bi-Annual Upskilling:
 - Recurring training schedule every six months

- Customized content based on role and experience:
 - New product introductions
 - Advanced service techniques
 - Leadership development (for eligible staff)
 - Conflict resolution scenarios
- Digital certification added to employee profile
- Recognition program for high achievers
- Knowledge retention assessment after 30 days
- Career Progression Visibility:
 - Interactive career pathway visualization in the mobile app
 - Clear progression routes displayed (e.g., Barista → Shift Leader → PIC → DM)
 - Specific requirements listed for each advancement:
 - Required certifications
 - Experience duration
 - Performance metrics
 - Additional training
 - Self-assessment tools to identify development areas
 - Transparent application process for internal promotions
- Implementation Requirements:
 - LMS platform selection and deployment
 - Content development for training modules
 - Integration with employee profiles
 - Career path mapping for all positions
 - Regular content updates schedule

5) Payroll & Deduction Modernization

- Payroll Audit Automation:
 - System automatically scrutinizes payroll calculations for anomalies:
 - Duplicate deductions
 - Excessive overtime hours

- Missing attendance records
 - Unusual pattern detection
- Flagged issues require HR review before processing
- Historical comparison to identify trends
- Reduction in payroll errors by estimated 85%
- Automated reconciliation with attendance data
- Interactive Payslip Viewer:
 - Detailed digital payslips accessible through the ProinT app
 - Interactive elements include:
 - Hover-over explanations for each deduction line
 - Calculation breakdowns for overtime and incentives
 - Comparative view with previous months
 - Year-to-date earnings summary
 - Visual representation of earnings and deductions
 - Export options for documentation needs
 - Questions can be submitted directly from the payslip viewer
- Implementation Requirements:
 - Payroll audit algorithm development
 - Interactive payslip UI design and development
 - Data visualization component integration
 - Historical payroll data migration
 - User acceptance testing

2. Function Production

Suggestions for Improvement in Production Process at Janji Jiwa:

1. Reward System for High-Performing Production Staff

Issue: Evaluations seem to focus only on errors, with no recognition system for consistently good performance.

Solution: Introduce an incentive or reward system based on individual and team performance to boost motivation.

2. Improved Waste Management

Issue: Although waste is recorded in the Sanmi app, there's no mention of analysis or waste-reduction efforts.

Solution: Conduct weekly waste audits to identify recurring issues and train baristas on material efficiency.

3. More Flexible Team Scheduling During Peak Hours

Issue: While teams are divided during busy hours, there's no mention of dynamic shift scheduling or sales-based predictions.

Solution: Use historical sales data to create demand-based shift schedules and prevent production bottlenecks.

3. Function Purchasing

Suggestions for Improvement in Purchasing Process at Janji Jiwa:

1. Implement Automated PO Approval System

- **Current Issue:** The manual approval process by DM and TSA takes 4-7 days, slowing down the procurement process.
- **Suggested Improvement:** Implement an automated system for PO approval that triggers automatic notifications and approvals based on predefined criteria. This would significantly reduce approval time and enhance efficiency in the purchasing process.

2. Introduce Real-Time Shipment Notification System

- **Current Issue:** There is no automatic notification system for the status of goods being shipped. PIC and Warehouse are often left waiting for updates manually.
- **Suggested Improvement:** Use an automated notification system integrated with the vendor's tracking system to inform PIC and Warehouse about shipment status in real-time. This would improve communication, reduce delays, and allow faster response times.

3. Automate Inventory Verification

- **Current Issue:** Warehouse currently performs manual inventory checks, which increases the chances of errors and delays in updating stock levels.
- **Suggested Improvement:** Introduce an automated inventory management system that uses barcode scanners or RFID technology to quickly verify and update stock levels in real-time. This would reduce human error and speed up the verification process.

4. Vendor Performance Evaluation System

- **Current Issue:** The vendor selection process is done periodically, but there is no clear system to continuously evaluate vendor performance.
- **Suggested Improvement:** Implement a vendor performance evaluation system that tracks key metrics such as delivery time, product quality, and responsiveness. This would help identify high-performing vendors and make the vendor selection process more dynamic.

5. Centralized Real-Time Scheduling System

- **Current Issue:** The scheduling of deliveries and stock management is done manually and communicated through group chats, causing confusion and potential delays.
- **Suggested Improvement:** Implement a centralized scheduling system that allows all relevant teams (Purchasing, Warehouse, and Delivery) to access and update the schedule in real time. This will ensure smoother coordination and better management of inventory and delivery times.
