PROFILE

Information Systems with Data Science concentration, undergraduate at President University (GPA: 3.78/4.00) with hands-on expertise in end-to-end data analysis, predictive modeling, and business intelligence. Proficient in Python, advanced SQL, Google BigQuery, Power BI, and Google Looker Studio. Proven ability to translate complex datasets into actionable business strategies and interactive dashboards.

EDUCATION

President University | Jababeka, Cikarang Graduation Date: December 2027
Bachelor of Computer Science in Information Systems (Undergraduate) GPA: 3.78/4.00

Technical Skills: SQL | Python | Power BI | Tableau | Excel | Google Looker Studio | Google BigQuery | Database | MySQL | PostgreSQL | HTML | Django | Figma | Laravel | GenAI

WORK EXPERIENCE

Codveda Technologies March 2026 - April 2026
Data Analyst Internship

- Executed end-to-end data preprocessing and EDA using Python (Pandas, NumPy) to ensure dataset integrity.
- Developed predictive ML models (Linear Regression, Random Forest) for Customer Churn Prediction, achieving AUC = 0.90.
- Leveraged NLP techniques for Sentiment Analysis to extract actionable consumer behavior insights.
- Translated statistical findings into strategic business recommendations and data visualizations for stakeholders.

PROJECTS

Titanic Survival Analysis Dashboard | Google Colab, Excel, SQL, Tableau August 2026 - August 2026

- Built an end-to-end data analytics pipeline using SQL (SQLite), Python (pandas), and Tableau to analyze survival patterns across 891 Titanic passenger records.
- Cleaned and preprocessed data in Python by handling missing values and engineering a new age-category feature to enable deeper survival segmentation.
- Designed an interactive Tableau dashboard and identified that first-class passengers had a 37% survival rate versus 14% for third-class, revealing a significant class-based disparity in outcomes.

Kitchen Sales Equipment Dashboard | Excel, SQL (Google BigQuery), Looker Studio July 2026 - July 2026

- Performed end-to-end data cleansing and transformation on 10,000+ rows of kitchen equipment transaction data using advanced Excel formulas and SQL (Google BigQuery) to ensure high data integrity.
- Analyzed key sales metrics, operational patterns, and logistics, tracking shipping costs, refund rates, and identifying top-performing categories ('Alat Masak', 'Alat Saji') versus revenue.
- Designed interactive dashboards using Google Looker Studio to visualize seasonal sales peaks, Q4 revenue distribution, and customer purchasing frequency.

Customer Behavior Analysis | Python, PostgreSQL, Power BI May 2026 - June 2026

- Analyzed 3,900 e-commerce transactions using Python, SQL, and Power BI to identify key drivers of online shopper behavior.
- Executed rigorous EDA with Pandas/NumPy and constructed advanced SQL queries (CTEs, Window Functions) to solve 13 critical business questions.
- Developed an interactive Power BI dashboard visualizing seasonal sales peaks and subscription impacts for strategic decision-making.

DVD Rental Movie Analysis | Python, PostgreSQL, Streamlit

March 2026 - April 2026

- Developed a full-stack web dashboard to analyze a DVD rental database, extracting insights on revenue drivers and customer behavior.
- Integrated an AI-powered smart analyst using Llama 3 via Groq for natural language data queries and automated chart generation.
- Built and deployed predictive machine learning models (Transformer, Random Forest) to accurately forecast upcoming quarterly business revenue.

Data Analytics Project at Codveda Technology | Python, Pandas, NumPy, NLP

March 2026 - April 2026

- Completed 5 hands-on data analytics projects using Python, Pandas, and Scikit-learn, covering data cleaning, exploratory data analysis, regression, classification, and NLP.
- Built a Random Forest classification model to predict customer churn, achieving 90% AUC and identifying total usage minutes and customer service calls as top churn indicators.
- Developed a Linear Regression model to predict house prices, achieving an R^2 score of 0.65, and applied NLP sentiment analysis using TextBlob to classify text data into positive, neutral, and negative categories.

ORGANIZATIONAL EXPERIENCE

National Batch Student | Novo Club

March 2026 - Present

- Executed cross-functional development programs within a nationwide student network, seamlessly aligning team initiatives with organizational goals.
- Proposed data-driven solutions during intensive leadership workshops and real-world case studies to address community challenges.
- Applied strategic problem-solving and project management skills to drive accuracy in project-based learning environments.

Google Developer Group | Google

December 2024 - Present

- Engaged in hands-on technical sessions focused on modern software development, data analytics, and cloud technologies.
- Collaborated with peers in coding workshops and collaborative hackathons to build practical, scalable tech solutions.

ADDITIONAL

Certifications: KarirNex Data Analyst Bootcamp Certified with Expert Predicate (2026), AI Ethics IBM SkillsBuild & Pijak (2026), Introduction to Generative AI IBM SkillsBuild & Pijak (2026), Junior Web Developer Certification BNSP & LSP BPPTIK (2025)

Languages: Indonesian (Native), English (Professional Working Proficiency)
